WHAT IS ESG?

ESG, is an acronym for Environmental, Social, and Governance. ESG applies to both internal and external aspects of a business and its value chain. ESG signifies the disclosure of various categories and topics related to sustainable business practices to investors and stakeholders. The framework contributes in evaluating a company's performance in areas such as environmental stewardship, social responsibility, and corporate governance. ESG is often used interchangeably with corporate social responsibility or corporate sustainability, however ESG is much more!

A 2020 KPMG Global Survey found that 80% of companies now report on sustainability, with a staggering 100% of top 100 companies in Japan and Mexico currently reporting on sustainability. As the expectations on corporate responsibility increase, and as transparency becomes more prevalent, companies are recognising the need to act by integrating sustainability in their strategy. Professional communication and good intentions are no longer enough. A well-defined and authentic corporate purpose is no longer an optional extra, it is a business essential.

Globally, ESG is becoming more important for all companies, governments and non-governmental organisations.
